Specialized in Minimally Invasive Treatment and Dialysis Therapy, We Promptly Accommodate The Needs of Medical Practice.

Dialysis—Covering All Dialysis-related Needs

We provide information to dialysis clinics, dialysis rooms within general hospitals and other relevant facilities, and offer a wide range of dialysis-related medical equipment.

Dialysis therapy is a type of treatment for renal failure. It takes over the functions of the kidney and artificially cleans the blood.

By providing information to dialysis clinics and dialysis rooms within general hospitals, and by offering dialyzers and other dialysis-related medical equipments, Dialysis Division at Sanwachimica accommodates a wide range of needs related to dialysis therapy.

Minimally Invasive Medical Care—Supporting Cutting-Edge, Minimally Invasive Treatment

We are among the first to focus on and have expertise in the most advanced “minimally invasive treatment” that is much less traumatic to patients.

The minimally invasive treatment is a cutting-edge treatment method with less injury to the body and minimized adverse impact on patients. It involves no surgery and thus represents many advantages including a shorter hospital stay.

In recent years, it is drawing greater attention as an alternative to surgical treatment, and IVR (vascular catheterization) is one of the typical examples of minimally invasive treatment.

This method is used in many areas including cardiovascular, cerebrovascular, gastroenterological endoscopic and peripheral vascular treatments. In the ever-evolving medical industry, we continuously improve our skills and expertise through study groups to contribute to better medical practice.

Our sales representatives are readily available 24 hours a day, 365 days a year to quickly respond to urgent requests from the medical field.

Support for Clinic Opening

Providing Total Support for Clinic Opening

We provide comprehensive support for all needs associated with new clinic opening, remodeling and interior finish work.

From new opening, remodeling and interior finish work of clinic facility to installation of new medical equipments, we provide consulting services for medical practitioners.

- Clinic facility design
- Proposals on medical equipments and in-clinic facilities depending on the use and purpose
- Financial consultation and leasing company introduction services

CHEMICAL

Accommodating Various Needs of Customers, We Play a Role in Technology Development in an Environment Friendly Manner.

Chemical Division

Offering a Wide Range of Lineup for Various Uses and Purposes

We offer double-faced tapes used for ever-advancing, innovative home electric appliances and electronics products.

Double-faced tapes are used for a variety of products around us including, for example, personal computers, smartphones, cell-phones, tablet PCs, gaming devices, vehicles and building materials.

The type of double-faced tape varies depending on the use, from electric insulation tape, parts fastening tape, impact absorption tape to heat dissipation tape. Double-faced tapes are an indispensable material to support lighter, thinner, shorter, and more compact products and their higher functionality as technologies for home electric appliances and electronics products rapidly advances.

New double-faced tape products that utilize new materials and advanced technologies such as recycled materials and environment-friendly solventless method are also being developed.

We help customers to select appropriate products from a wide range of manufacturers' offerings to meet the use and budget requirements.
